Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping

Mohammed A. Kalkhan

Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping Mohammed A. Kalkhan

Geospatial information modeling and mapping has become an important tool for the investigation and management of natural resources at the landscape scale. **Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping** reviews the types and applications of geospatial information data, such as remote sensing, geographic information systems (GIS), and GPS as well as their integration into landscape-scale geospatial statistical models and maps.

The book explores how to extract information from remotely sensed imagery, GIS, and GPS, and how to combine this with field data—vegetation, soil, and environmental—to produce a spatial model that can be reconstructed and displayed using GIS software. Readers learn the requirements and limitations of each geospatial modeling and mapping tool. Case studies with real-life examples illustrate important applications of the models.

Topics covered in this book include:

- An overview of the geospatial information sciences and technology and spatial statistics
- Sampling methods and applications, including probability sampling and nonrandom sampling, and issues to consider in sampling and plot design
- Fine and coarse scale variability
- Spatial sampling schemes and spatial pattern
- Linear and spatial correlation statistics, including Moran's I , Geary's C , cross-correlation statistics, and

inverse distance weighting

- Geospatial statistics analysis using stepwise regression, ordinary least squares (OLS), variogram, kriging, spatial auto-regression, binary classification trees, cokriging, and geospatial models for presence and absence data
- How to use R statistical software to work on statistical analyses and case studies, and to develop a geospatial statistical model

The book includes practical examples and laboratory exercises using ArcInfo, ArcView, ArcGIS, and other popular software for geospatial modeling. It is accessible to readers from various fields, without requiring advanced knowledge of geospatial information sciences or quantitative methods.

From reader reviews:

James Boyett:

Why don't make it to become your habit? Right now, try to ready your time to do the important take action, like looking for your favorite reserve and reading a reserve. Beside you can solve your long lasting problem; you can add your knowledge by the book entitled Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping. Try to the actual book Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping as your pal. It means that it can to get your friend when you really feel alone and beside associated with course make you smarter than before. Yeah, it is very fortunated for you personally. The book makes you much more confidence because you can know anything by the book. So , let us make new experience and knowledge with this book.

Marla Fiske:

Reading a book can be one of a lot of activity that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new info. When you read a publication you will get new information mainly because book is one of numerous ways to share the information as well as their idea. Second, looking at a book will make you actually more imaginative. When you studying a book especially fictional works book the author will bring someone to imagine the story how the character types do it anything. Third, you may share your knowledge to other individuals. When you read this Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping, you can tells your family, friends as well as soon about yours guide. Your knowledge can inspire different ones, make them reading a reserve.

Mary Brott:

In this time globalization it is important to someone to find information. The information will make anyone to understand the condition of the world. The fitness of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, magazine, book, and soon. You can see that now, a lot of publisher that will print many kinds of book. The particular book that recommended for you is Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping this e-book consist a lot of the information of the condition of this world now. This specific book was represented how do the world has grown up. The language styles that writer require to explain it is easy to understand. Often the writer made some study when he makes this book. Here is why this book appropriate all of you.

Victor McDowell:

You will get this Spatial Statistics: GeoSpatial Information Modeling and Thematic Mapping by visit the bookstore or Mall. Only viewing or reviewing it can to be your solve challenge if you get difficulties on your knowledge. Kinds of this guide are various. Not only by means of written or printed but also can you enjoy this book by e-book. In the modern era like now, you just looking by your local mobile phone and searching

what their problem. Right now, choose your ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose right ways for you.
