Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) Loukas Grafakos
The primary goal of this text is to present the theoretical foundation of the field of Fourier analysis. This book is mainly addressed to graduate students in mathematics and is designed to serve for a three-course sequence on the subject. The only prerequisite for understanding the text is satisfactory completion of a course in measure theory, Lebesgue integration, and complex variables. This book is intended to present the selected topics in some depth and stimulate further study. Although the emphasis falls on real variable methods in Euclidean spaces, a chapter is devoted to the fundamentals of analysis on the torus. This material is included for historical reasons, as the genesis of Fourier analysis can be found in trigonometric expansions of periodic functions in several variables. While the 1st edition was published as a single volume, the new edition will contain 120 pp of new material, with an additional chapter on time-frequency analysis and other modern topics. As a result, the book is now being published in 2 separate volumes, the first volume containing the classical topics (Lp Spaces, Littlewood-Paley Theory, Smoothness, etc...), the second volume containing the modern topics (weighted inequalities, wavelets, atomic decomposition, etc...). From a review of the first edition: "Grafakos's book is very user-friendly with numerous examples illustrating the definitions and ideas. It is more suitable for readers who want to get a feel for current research. The treatment is thoroughly modern with free use of operators and functional analysis. Moreover, unlike many authors, Grafakos has clearly spent a great deal of time preparing the exercises." - Ken Ross, MAA Online

From reader reviews:

Lauren Marine:

Reading can be called a head hangout, why? Because when you find yourself reading a book specifically the book entitled Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) your mind will drift away through every dimension, wandering in each and every aspect that maybe unfamiliar for but surely might be your mind friends. Imagining every single word written in a publication then become one contact form conclusion and explanation which maybe you never get previous to. The Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) giving you one more experience more than blown away your head but also giving you useful information for your better life within this era. So now let us teach you the relaxing pattern the following is your body and mind will be pleased when you are finished studying it, like winning a game. Do you want to try this extraordinary wasting spare time activity?

Kimberly Hopkins:

Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) can be one of your beginner books that are good idea. We all recommend that straight away because this publication has good vocabulary that can increase your knowledge in words, easy to understand, bit entertaining but delivering the information. The writer giving his/her effort that will put every word into delight arrangement in writing Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) however doesn't forget the main place, giving the reader the hottest along with based confirm resource facts that maybe you can be one among it. This great information can easily draw you into new stage of crucial considering.

Shawn McDonald:

As we know that book is essential thing to add our expertise for everything. By a book we can know everything we would like. A book is a list of written, printed, illustrated or blank sheet. Every year ended up being exactly added. This guide Classical Fourier Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics) was filled concerning science. Spend your spare time to add your knowledge about your research competence. Some people has diverse feel when they reading any book. If you know how big advantage of a book, you can really feel enjoy to read a e-book. In the modern era like today, many ways to get book you wanted.

Thomas Palmer:

What is your hobby? Have you heard which question when you got learners? We believe that that query was given by teacher to their students. Many kinds of hobby, Every person has different hobby. And also you know that little person like reading or as studying become their hobby. You need to understand that reading is very important and book as to be the thing. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You discover good news or update concerning something by book. Different categories of books that can you go onto be your object. One of them are these claims Classical Fourier

Analysis: Preliminary Entry 249 (Graduate Texts in Mathematics).
