Improving Urban Science Education: New Roles for Teachers, Students, and Researchers (Reverberations: Contemporary Curriculum and Pedagogy)

Improving Urban Science Education: New Roles for Teachers, Students, and Researchers (Reverberations: Contemporary Curriculum and Pedagogy)

Many would argue that the state of urban science education has been static for the past several decades and that there is little to learn from it. Rather than accepting this deficit perspective, *Improving Urban Science Education* strives to recognize and understand the successes that exist there by systematically documenting seven years of research into issues salient to teaching and learning in urban high school science classes. Grounded in the post structuralism of William Sewell_ and brought to life through the experiences of different students, teachers, and school settings in Philadelphia_ this book shows how teachers and students can work together to enact meaningful science education when social and cultural differences as well as inappropriate curricula often make the challenges seem insurmountable. Chapters contain rich images of urban youth and each strives to offer insights into problems and suggestions for resolving them. Most significant, in spite of the challenges, the research offers hope and shows that fresh approaches to teaching and learning can lead students_ some who have already been pronounced academic, even societal, failures_ to becoming avid and deep learners of science.
