Haskell Financial Data Modeling and Predictive Analytics Pavel Ryzhov

In Detail

Haskell is one of the three most influential functional programming languages available today along with Lisp and Standard ML. When used for financial analysis, you can achieve a much-improved level of prediction and clear problem descriptions.

Haskell Financial Data Modeling and Predictive Analytics is a hands-on guide that employs a mix of theory and practice. Starting with the basics of Haskell, this book walks you through the mathematics involved and how this is implemented in Haskell.

The book starts with an introduction to the Haskell platform and the Glasgow Haskell Compiler (GHC). You will then learn about the basics of high frequency financial data mathematics as well as how to implement these mathematical algorithms in Haskell.

You will also learn about the most popular Haskell libraries and frameworks like Attoparsec, QuickCheck, and HMatrix. You will also become familiar with database access using Yesod's Persistence library, allowing you to keep your data organized. The book then moves on to discuss the mathematics of counting processes and autoregressive conditional duration models, which are quite common modeling tools for high frequency tick data. At the end of the book, you will also learn about the volatility prediction technique.

With Haskell Financial Data Modeling and Predictive Analytics, you will learn everything you need to know about financial data modeling and predictive analytics using functional programming in Haskell.

Approach

This book is a hands-on guide that teaches readers how to use Haskell's tools and libraries to analyze data from real-world sources in an easy-to-understand manner.

Who this book is for

This book is great for developers who are new to financial data modeling using Haskell. A basic knowledge of functional programming is not required but will be useful. An interest in high frequency finance is essential.

From reader reviews:

Shirley Frazier:

Have you spare time for the day? What do you do when you have a lot more or little spare time? Yes, you can choose the suitable activity intended for spend your time. Any person spent all their spare time to take a walk, shopping, or went to the actual Mall. How about open as well as read a book eligible Haskell Financial Data Modeling and Predictive Analytics? Maybe it is to become best activity for you. You know beside you can spend your time along with your favorite's book, you can cleverer than before. Do you agree with it is opinion or you have various other opinion?

Carmine Adams:

In this 21st century, people become competitive in each and every way. By being competitive at this point, people have do something to make these survives, being in the middle of typically the crowded place and notice by surrounding. One thing that often many people have underestimated that for a while is reading. Yes, by reading a book your ability to survive boost then having chance to remain than other is high. In your case who want to start reading a book, we give you this Haskell Financial Data Modeling and Predictive Analytics book as basic and daily reading book. Why, because this book is usually more than just a book.

Helen Palmer:

Playing with family within a park, coming to see the marine world or hanging out with close friends is thing that usually you could have done when you have spare time, after that why you don't try thing that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Haskell Financial Data Modeling and Predictive Analytics, you could enjoy both. It is very good combination right, you still wish to miss it? What kind of hang type is it? Oh occur its mind hangout guys. What? Still don't obtain it, oh come on its identified as reading friends.

Madeleine Bandy:

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information from a book. Book is composed or printed or descriptive from each source that will filled update of news. On this modern era like now, many ways to get information are available for you actually. From media social including newspaper, magazines, science publication, encyclopedia, reference book, story and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just in search of the Haskell Financial Data Modeling and Predictive Analytics when you essential it?
