Landscape Genetics: Concepts, Methods, Applications Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits

Despite the substantial interest in landscape genetics from the scientific community, learning about the concepts and methods underlying the field remains very challenging. The reason for this is the highly interdisciplinary nature of the field, which combines population genetics, landscape ecology, and spatial statistics. These fields have traditionally been treated separately in classes and textbooks, and very few scientists have received the interdisciplinary training necessary to efficiently teach or apply the diversity of techniques encompassed by landscape genetics. To address the current knowledge gap, this book provides the first in depth treatment of landscape genetics in a single volume. Specifically, this book delivers fundamental concepts and methods underlying the field, covering particularly important analytical methods in detail, and presenting empirical and theoretical applications of landscape genetics for a variety of environments and species. Consistent with the interdisciplinary nature of landscape genetics, the book combines an introductory, textbook like section with additional sections on advanced topics and applications that are more typical of edited volumes. The chapter topics and the expertise of the authors and the editorial team make the book a standard reference for anyone interested in landscape genetics. The book includes contributions from many of the leading researchers in landscape genetics. The group of scientists we have assembled has worked on several collaborative projects over the last years, including a large number of peer reviewed papers, several landscape genetics workshops at international conferences, and a distributed graduate seminar on landscape genetics. Based on the experiences gained during these collaborative teaching and research activities, the book includes chapters that synthesize fundamental concepts and methods underlying landscape genetics (Part 1), chapters on advanced topics that deserve a more in depth treatment (Part 2), and chapters illustrating the use of concepts and methods in empirical applications (Part 3). This structure ensures a high usefulness of the book for beginning landscape geneticists and experienced researchers alike, so that it has a broad target audience. At least one of the four co editors is involved in almost every chapter of the book, thereby ensuring a high consistency and coherency among chapters.

From reader reviews:

Jerry Gavin:

Book is definitely written, printed, or outlined for everything. You can know everything you want by a e-book. Book has a different type. To be sure that book is important factor to bring us around the world. Next to that you can your reading proficiency was fluently. A book Landscape Genetics: Concepts, Methods, Applications will make you to possibly be smarter. You can feel considerably more confidence if you can know about every thing. But some of you think that will open or reading some sort of book make you bored. It is not make you fun. Why they could be thought like that? Have you searching for best book or suited book with you?

Dominic Maddock:

Reading can called mind hangout, why? Because if you are reading a book specifically book entitled Landscape Genetics: Concepts, Methods, Applications your head will drift away trough every dimension, wandering in each and every aspect that maybe mysterious for but surely will become your mind friends. Imaging every word written in a e-book then become one type conclusion and explanation that will maybe you never get just before. The Landscape Genetics: Concepts, Methods, Applications giving you a different experience more than blown away the mind but also giving you useful info for your better life with this era. So now let us present to you the relaxing pattern at this point is your body and mind will probably be pleased when you are finished examining it, like winning a. Do you want to try this extraordinary spending spare time activity?

Jesus Brewster:

Landscape Genetics: Concepts, Methods, Applications can be one of your basic books that are good idea. We all recommend that straight away because this reserve has good vocabulary which could increase your knowledge in terminology, easy to understand, bit entertaining but nonetheless delivering the information. The author giving his/her effort to put every word into joy arrangement in writing Landscape Genetics: Concepts, Methods, Applications yet doesn't forget the main point, giving the reader the hottest as well as based confirm resource information that maybe you can be one of it. This great information could drawn you into completely new stage of crucial contemplating.

Gene Green:

What is your hobby? Have you heard which question when you got students? We believe that that question was given by teacher for their students. Many kinds of hobby, All people has different hobby. And you also know that little person just like reading or as reading through become their hobby. You need to know that reading is very important along with book as to be the factor. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You discover good news or update in relation to something by book. A substantial number of sorts of books that can you decide to try be your object. One of

them is niagra Landscape Genetics: Concepts, Methods, Applications.
