New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series)

Richard J. Hobbs

New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series) Richard J. Hobbs

As scientific understanding about ecological processes has grown, the idea that ecosystem dynamics are complex, nonlinear, and often unpredictable has gained prominence. Of particular importance is the idea that rather than following an inevitable progression toward an ultimate endpoint, some ecosystems may occur in a number of states depending on past and present ecological conditions. The emerging idea of “restoration thresholds” also enables scientists to recognize when ecological systems are likely to recover on their own and when active restoration efforts are needed.

Conceptual models based on alternative stable states and restoration thresholds can help inform restoration efforts. *New Models for Ecosystem Dynamics and Restoration* brings together leading experts from around the world to explore how conceptual models of ecosystem dynamics can be applied to the recovery of degraded systems and how recent advances in our understanding of ecosystem and landscape dynamics can be translated into conceptual and practical frameworks for restoration.

In the first part of the book, background chapters present and discuss the basic concepts and models and explore the implications of new scientific research on restoration practice. The second part considers the dynamics and restoration of different ecosystems, ranging from arid lands to grasslands, woodlands, and savannahs, to forests and wetlands, to production landscapes. A summary chapter by the editors discusses the implications of theory and practice of the ideas described in preceding chapters.

New Models for Ecosystem Dynamics and Restoration aims to widen the scope and increase the application of threshold models by critiquing their application in a wide range of ecosystem types. It will also help scientists and restorationists correctly diagnose ecosystem damage, identify restoration thresholds, and develop corrective methodologies that can overcome such thresholds.

From reader reviews:

Adam Jones:

New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series) can be one of your basic books that are good idea. Many of us recommend that straight away because this e-book has good vocabulary that could increase your knowledge in words, easy to understand, bit entertaining but still delivering the information. The article writer giving his/her effort that will put every word into satisfaction arrangement in writing New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series) although doesn't forget the main place, giving the reader the hottest in addition to based confirm resource info that maybe you can be certainly one of it. This great information can certainly drawn you into brand new stage of crucial contemplating.

Horace Godbolt:

Reading a book to become new life style in this year; every people loves to learn a book. When you go through a book you can get a great deal of benefit. When you read books, you can improve your knowledge, due to the fact book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you need to get information about your analysis, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this kind of us novel, comics, in addition to soon. The New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series) provide you with new experience in studying a book.

Tara Carlson:

As we know that book is important thing to add our information for everything. By a e-book we can know everything we really wish for. A book is a list of written, printed, illustrated or blank sheet. Every year had been exactly added. This book New Models for Ecosystem Dynamics and Restoration (The Science and Practice of Ecological Restoration Series) was filled with regards to science. Spend your spare time to add your knowledge about your scientific research competence. Some people has various feel when they reading a new book. If you know how big good thing about a book, you can experience enjoy to read a guide. In the modern era like today, many ways to get book that you just wanted.

Marge Lee:

As a student exactly feel bored to help reading. If their teacher asked them to go to the library or make summary for some book, they are complained. Just tiny students that has reading's soul or real their interest. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading very seriously. Any students feel that reading through is not important, boring and also can't see colorful pictures on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. So , this New Models for Ecosystem Dynamics and Restoration (The Science and Practice

of Ecological Restoration Series) can make you truly feel more interested to read.
