Algorithmic Learning in a Random World

Vladimir Vovk, Alex Gammerman, Glenn Shafer

Algorithmic Learning in a Random World Vladimir Vovk, Alex Gammerman, Glenn Shafer

Algorithmic Learning in a Random World describes recent theoretical and experimental developments in building computable approximations to Kolmogorov's algorithmic notion of randomness. Based on these approximations, a new set of machine learning algorithms have been developed that can be used to make predictions and to estimate their confidence and credibility in high-dimensional spaces under the usual assumption that the data are independent and identically distributed (assumption of randomness). Another aim of this unique monograph is to outline some limits of predictions: The approach based on algorithmic theory of randomness allows for the proof of impossibility of prediction in certain situations. The book describes how several important machine learning problems, such as density estimation in high-dimensional spaces, cannot be solved if the only assumption is randomness.

From reader reviews:

Patricia Ables:

The book Algorithmic Learning in a Random World can give more knowledge and also the precise product information about everything you want. So why must we leave the good thing like a book Algorithmic Learning in a Random World? Several of you have a different opinion about reserve. But one aim this book can give many facts for us. It is absolutely appropriate. Right now, try to closer together with your book. Knowledge or data that you take for that, you are able to give for each other; you could share all of these. Book Algorithmic Learning in a Random World has simple shape but you know: it has great and massive function for you. You can look the enormous world by open and read a guide. So it is very wonderful.

Roxanne Mazon:

Book is to be different per grade. Book for children until finally adult are different content. As it is known to us that book is very important for people. The book Algorithmic Learning in a Random World seemed to be making you to know about other understanding and of course you can take more information. It is rather advantages for you. The publication Algorithmic Learning in a Random World is not only giving you considerably more new information but also being your friend when you sense bored. You can spend your own personal spend time to read your e-book. Try to make relationship with the book Algorithmic Learning in a Random World. You never really feel lose out for everything in the event you read some books.

Lynn Lambert:

Now a day those who Living in the era exactly where everything reachable by interact with the internet and the resources inside can be true or not call for people to be aware of each data they get. How many people to be smart in acquiring any information nowadays? Of course the solution is reading a book. Reading a book can help men and women out of this uncertainty Information particularly this Algorithmic Learning in a Random World book because book offers you rich info and knowledge. Of course the data in this book hundred per-cent guarantees there is no doubt in it you know.

Rita Furguson:

Publication is one of source of know-how. We can add our expertise from it. Not only for students but in addition native or citizen will need book to know the up-date information of year to year. As we know those textbooks have many advantages. Beside many of us add our knowledge, could also bring us to around the world. By book Algorithmic Learning in a Random World we can get more advantage. Don't that you be creative people? Being creative person must love to read a book. Simply choose the best book that ideal with your aim. Don't possibly be doubt to change your life with this book Algorithmic Learning in a Random World. You can more appealing than now.
