This book demonstrates how to use multilevel and longitudinal modeling techniques available in the IBM SPSS mixed-effects program (MIXED). Annotated screen shots provide readers with a step-by-step understanding of each technique and navigating the program. Readers learn how to set up, run, and interpret a variety of models. Diagnostic tools, data management issues, and related graphics are introduced throughout. Annotated syntax is also available for those who prefer this approach. Extended examples illustrate the logic of model development to show readers the rationale of the research questions and the steps around which the analyses are structured. The data used in the text and syntax examples are available at www.routledge.com/9780415817110.

Highlights of the new edition include:

- Updated throughout to reflect IBM SPSS Version 21.
- Further coverage of growth trajectories, coding time-related variables, covariance structures, individual change and longitudinal experimental designs (Ch.5).
- Extended discussion of other types of research designs for examining change (e.g., regression discontinuity, quasi-experimental) over time (Ch.6).
- New examples specifying multiple latent constructs and parallel growth processes (Ch. 7).
- Discussion of alternatives for dealing with missing data and the use of sample weights within multilevel data structures (Ch.1).

The book opens with the conceptual and methodological issues associated with multilevel and longitudinal modeling, followed by a discussion of SPSS data management techniques which facilitate working with

multilevel, longitudinal, and cross-classified data sets. Chapters 3 and 4 introduce the basics of multilevel modeling: developing a multilevel model, interpreting output, and trouble-shooting common programming and modeling problems. Models for investigating individual and organizational change are presented in chapters 5 and 6, followed by models with multivariate outcomes in chapter 7. Chapter 8 provides an illustration of multilevel models with cross-classified data structures. The book concludes with ways to expand on the various multilevel and longitudinal modeling techniques and issues when conducting multilevel analyses. ?

Ideal as a supplementary text for graduate courses on multilevel and longitudinal modeling, multivariate statistics, and research design taught in education, psychology, business, and sociology, this book's practical approach also appeals to researchers in these fields. The book provides an excellent supplement to Heck & Thomas's *An Introduction to Multilevel Modeling Techniques, 2nd Edition*; however, it can also be used with any multilevel and/or longitudinal modeling book or as a stand-alone text.

From reader reviews:

Amanda Haskin:

Nowadays reading books become more than want or need but also turn into a life style. This reading addiction give you lot of advantages. The huge benefits you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The information you get based on what kind of publication you read, if you want attract knowledge just go with schooling books but if you want sense happy read one along with theme for entertaining such as comic or novel. Typically the Multilevel and Longitudinal Modeling with IBM SPSS (Quantitative Methodology Series) is kind of reserve which is giving the reader unpredictable experience.

Marilyn Apperson:

Reading can called thoughts hangout, why? Because if you find yourself reading a book mainly book entitled Multilevel and Longitudinal Modeling with IBM SPSS (Quantitative Methodology Series) your thoughts will drift away trough every dimension, wandering in every single aspect that maybe mysterious for but surely will end up your mind friends. Imaging each word written in a guide then become one type conclusion and explanation that maybe you never get ahead of. The Multilevel and Longitudinal Modeling with IBM SPSS (Quantitative Methodology Series) giving you one more experience more than blown away your head but also giving you useful data for your better life in this era. So now let us present to you the relaxing pattern the following is your body and mind are going to be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary investing spare time activity?

Jonathan Scott:

Does one one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Aim to pick one book that you never know the inside because don't ascertain book by its cover may doesn't work at this point is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside appear likes. Maybe you answer may be Multilevel and Longitudinal Modeling with IBM SPSS (Quantitative Methodology Series) why because the fantastic cover that make you consider about the content will not disappoint anyone. The inside or content is definitely fantastic as the outside or cover. Your reading sixth sense will directly assist you to pick up this book.

Carol Johnson:

In this period of time globalization it is important to someone to receive information. The information will make anyone to understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of references to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. The book that recommended to you personally is Multilevel and Longitudinal Modeling with IBM SPSS (Quantitative Methodology Series) this e-book consist a lot of the information from the condition of this world now. That

book was represented how can the world has grown up. The terminology styles that writer use to explain it is easy to understand. The writer made some study when he makes this book. Honestly, that is why this book acceptable all of you.
